

Direct Push Analytical Corp.

54DT Track Mounted Geoprobe

The Geoprobe® 54DT is a track mounted unit similar in drilling power to the 5400 series truck mounted Geoprobes that are well known in the industry. It is similar to a Bobcat on tracks, and is smaller in size than a pickup truck. Its size and exceptional maneuverability allow for access to more confined drilling areas (inside and outside of buildings) where a pickup truck probe or larger track rig may not be able to access.

Direct Push Analytical prefers to discuss project needs during the bidding process to help determine the best suited and most efficient and economical machine for your project. Our bids often give you the pricing on more than one piece of equipment if the specific access requirements are not fully known at the time of the quote request.

54DT Fast Facts:

Width = 48 inches

Folded Height = 65 inches

Unfolded mast height = 123 inches

Length = 92 inches

Weight = 3700 lbs

Torque = 609 ft. lb

Pulling power = 27,000 lbs

Reliable GH41 Soil Probing Hammer

Rear stabilization outriggers

Kubota diesel engine

Regular PVC Wells via dual tube installation: ½ inch up to 1 inch (1" diameter with minimal sandpack)

Prepack Wells via dual tube installation: ½ inch to ¾ inch ID prepacked screens
