66DT Track Mounted Geoprobe®

The 66DT Track Mounted Geoprobe is the most powerful and perhaps the most versatile probe in DPAC's fleet. The compact size of the Model 66DT gets you in to confined spaces to get the work done. Because the weight of the unit is evenly distributed over both tracks, the 66DT can easily maneuver through shallow water, soft sands, or muddy fields. But its convenient structure doesn't sacrifice strength... the 66DT is as powerful as the truck-mounted 66 series units with an astounding 17.5 tons of downforce and 23.5 tons of retraction force.

The 66DT is equipped with the DT32 Dual Tube Sampling system. This tooling utilizes 3.25 inch probe rods as the outer casing and 1.25 inch rods as the inner rod string. The cutting shoe shears a 1.85 inch soil core with 5 foot pushes. The DT32 system can install 2 inch traditional wells in the borehole after soil core collection. 1.0 or 1.5 inch prepacked monitoring wells can also be installed. Should your project require the collection of **Shelby Tube samplers** or the installation of **2 inch monitoring wells**, the 66DT is capable of turning 8 inch OD hollow stem augers with 4.25 inch ID. Whatever your scope, whatever the site conditions, the 66DT can do it all.

Model 66DT Features:

- Switches from direct push tooling to hollow stem augers in a matter of minutes
- 66-inch probe cylinder stroke allows use of 5-foot probe rods
- **21 ton pulling capacity** for today's larger sampling tools and deeper depths
- Equipped with the powerful GH60 Soil Probing Hammer with **17.5 tons of downforce**
- Wireless remote control for easy and safe and precise maneuvering
- Built-in rotary spindle for concrete drilling, augering, and anchoring
- Independently driven rubber tracks and hydraulic movement in all three axes allows easy probe alignment with tool string
- Compatible with Geoprobe® brand Logging Equipment including MIP and EC probes
- Rig Specs: Weight-5,000 lbs, 47" wide, 121" long, 156" tall (unfolded)
47" wide, 92" long, 74" tall (folded)
